

Blog Entry © Saturday, May 25, 2025, Return to Baseball Ballistics by James Pate Williams, Jr. BA, BS, Master of Software Engineering, PhD Computer Science Return to Baseball Ballistics

I translated my baseball ballistics C/C++ Win32 console application to a Win32 C/C++ Desktop Graphical User Interface application. The main window has three Function menu items which are:

1. Analytic
2. Classic
3. Numeric

The best online reference that I have been able to find is:

[04-LAJPE-782 Chudinov.pdf](#)

The “Analytic” dialog after pressing the “Table” button is:

Ballistics Dialog

Ballistics Input

Drag k

0.000625

v0 m/s

40.000000

Angle

45.000000

H = 30.134495

T = 4.958115

Va = 19.299618

L = 95.689733

Ta = 2.297313

xa = 53.698807

Theta1 = -58.555084

V1 = 25.998419

Window Snip

Draw

Table

Ok

Cancel

Next, we have the “Classic” function dialog:

Ballistics Dialog

Ballistics Input

Drag k

V0 m/s

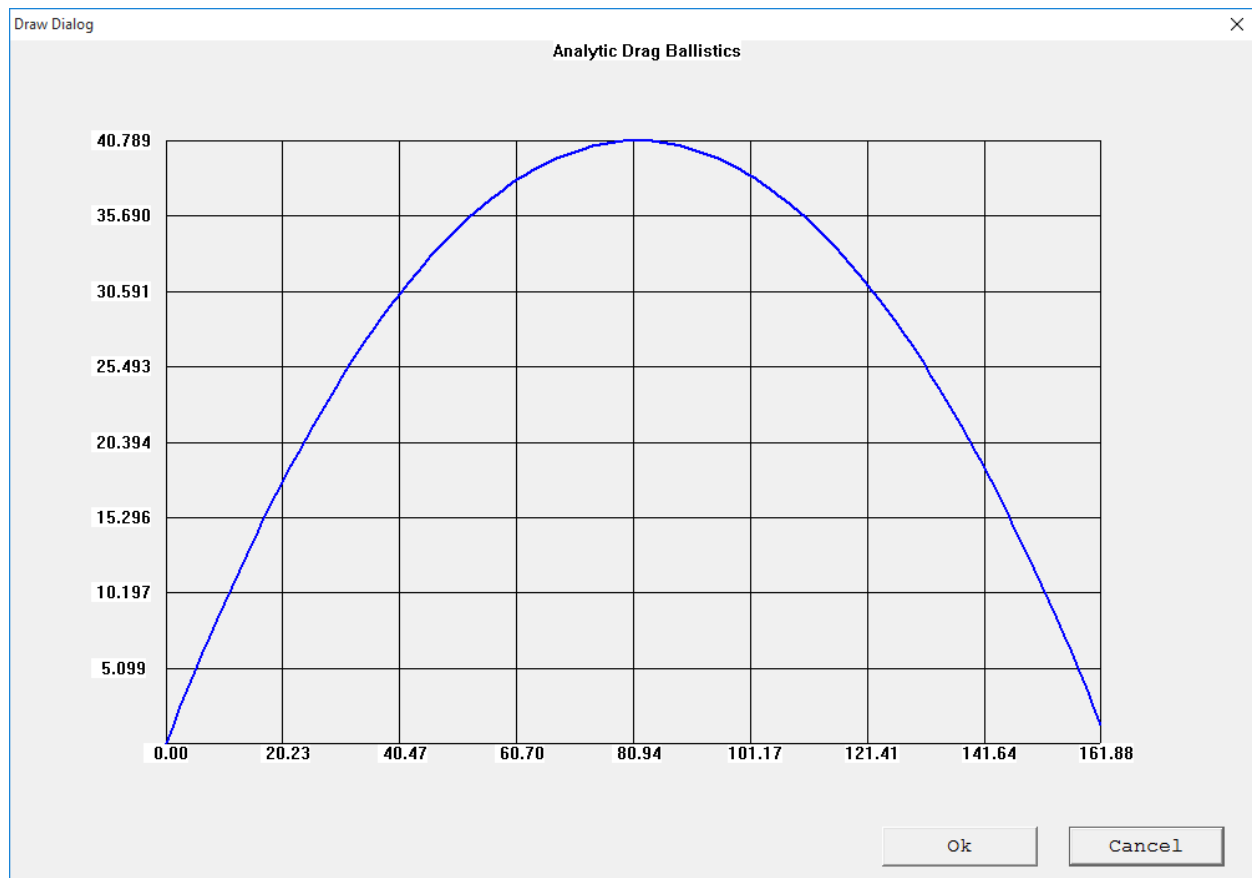

Angle

H = 40.788649
T = 5.768386
Va = 28.284271
L = 163.154594
Ta = 2.884193
xa = 81.577297
Theta1 = -45.000000
V1 = 40.000000

Window Snip

Draw Table Ok Cancel

Unfortunately, I mislabeled the graph dialog in this case.

Last is the “Numeric” functionality which uses a Runge-Kutta fifth order method:

Ballistics Dialog

Ballistics Input

Drag k

0.000625

V0 m/s

40.000000

Angle

45.000000

H = 29.825602

T = 4.915000

Va = 19.301233

L = 96.112304

Ta = 2.311000

xa = 53.050084

Theta1 = -57.272918

V1 = 25.530379

Draw

Table

Ok

Cancel

Draw Dialog

Numeric Runge-Kutta 5

Ok
